

RESCAD Funds - Swiss Equity - I

Investment overview

Objective

To participate to the Swiss equity market growth.

Fund Assets

The Fund invests in companies listed in the Swiss Performance Index, mainly blue chip stocks and also partly in mid and small capitalised Swiss companies.

Investment process

The Fund is actively managed and invests in attractive business models with sound management found thanks to a structured bottom up investment approach and a top down risk management process.

Fund performance since inception

Performance disclosures

The published performance represents past data. Past performance may not be a reliable guide to future performance. The performance data does not take into account of the commissions and costs incurred on the issue and redemption of units. There is no guarantee that the same yields will be obtained in the future. The value and income of any of your investments may fluctuate with market conditions and may lose some or all its value. The Fund may be affected by changes in currency exchange rates, which can have an adverse effect on the value or income of the Fund.

Risk considerations

The Share Class is assigned to this risk category because of the price variations resulting from its currency and the nature of the fund investment strategy.

The risk category shown is based on historical data and may not be a reliable indication for the future risk profile of the Share Class.

It is not a target or a guarantee and may change over time. The lowest category does not mean a risk-free investment.

The Fund offers no capital guarantee or asset protection measures.

The Fund may be exposed to the following risks which are not adequately captured by the synthetic risk indicator and may negatively impact its value:

- Operational risk: losses resulting from human errors, system failures, incorrect valuation and safekeeping of assets.
- Counterparty risk: losses occur when a counterparty does not honour its obligations related to contracts such as over-the-counter derivatives.
- Credit risk: sudden losses may occur when issuers of debt securities default on their payment obligations.

Glossary

Alpha: The percentage performance of a fund above or below that explained by its exposure market.

Beta: Average extent a fund's return moves relative to its benchmark.

Inception date: Average extent a fund's return moves relative to its benchmark.

Launch date: The date when the Fund was activated in its current legal status.

Volatility & Standard Deviation: A measure of historical volatility. It is calculated by comparing the average return with the average variance from that return.

Tracking error: Standard deviation of the relative returns (portfolio return minus benchmark return).

Information ratio: A way of measuring the value added by a portfolio manager relative to a benchmark on a risk adjusted basis.

NAV: An acronym of net asset value.

Sharpe ratio: The fund's risk adjusted performance. It is calculated by dividing the excess return (portfolio return minus risk free return) by the volatility.

Correlation: How a portfolio's return moves in relation to the benchmark.

Total expense ratio: Ongoing charges over 12 months. It is annually updated but may be adjusted more frequently. Portfolio transaction costs are excluded.

ESG: ESG refers to Environmental, Social & Governance and is measured by LSEG, which provides a score between 0 and 100 or D- to A+.
